Dr. Rima Habre is an Associate Professor of Environmental Health and Spatial Sciences at the University of Southern California. Her research aims to understand the effects of co-occurring environmental exposures, air pollution mixtures and social stressors on the health of vulnerable populations across the life course. Dr. Habre co-chairs the Geospatial Working Group in the NIH ECHO Program and is also MPI and Project Lead in the ECHO and MADRES centers at USC, respectively, investigating the effects of neighborhoods, air pollution sources, and mixtures on maternal and child health disparities.
